7-1a (Rev. 5-18-99)

## FEDERAL BUREAU OF INVESTIGATION WASHINGTON, D. C. 20535

## Report of Examination

Examiner Name: Douglas P. Murphy Date: January 29, 2001

Unit: Firearms / Toolmarks Phone No.: 202 324-4383

Case ID No.: 192C-MM-96243 Lab No.: 001107013 KG 001215006 KG

Results of Examinations:

Examination of the Q71 and Q72 shirts detected the presence of a pattern of holes in the back / right shoulder area that is consistent with the passage of shot. This pattern was compared to test patterns produced by firing ammunition like that submitted in this case in the K3 shotgun at targets placed at various distances. If the pattern of holes in the Q71 and Q72 shirts was produced by shot pellets fired from the K3 shotgun, their density and distribution indicate that the muzzle of the shotgun was greater than five feet but less than fifteen feet from the shirts.

A single hole was detected in the lower portion of the back of each shirt. Due to the absence of a shot pattern or gunshot residue, no conclusions could be reached about these two holes.

7-1 (Rcv. 5-13-99)
